

ROHIT S

Nemom, Trivandrum, Kerala

☎ +91 77362 57336 ✉ rohits03.std@gmail.com 🌐 [Portfolio](#) 🐙 github.com/roohhh-7 🔗 linkedin.com/in/rohits773625

Skills

AI: Generative AI, RAG, Context Engineering, Knowledge Graphs (Neo4j), LLM Evaluation

Product: 0-to-1 Discovery & Development, Product Vision, Roadmapping, GTM Strategy, PRDs, User Story Mapping, Backlog Refinement, RICE Prioritization, Agile

Data: SQL, A/B Testing, Funnel Analysis, Cohort Analysis, North Star Metrics, Growth Tracking

UX: User Research, User Journey Mapping, Rapid Prototyping, Wireframing

Tools: Jira, Confluence, Figma, Power BI, Supabase, n8n, GitHub

Education

Indian Institute of Information Technology Kottayam

Nov. 2022 – April 2026

Bachelor of Technology in Electronics and Communication

Kerala, India

St. Joseph's HSS, Trivandrum

June 2019 – May 2021

Class 12

Kerala, India

Experience

C.R.E.A.T.E Lab

Oct 2025 – Ongoing

Product Intern

IIIT kottayam

- Contributing to development of a digital-twin ERP product for Ayurvedic clinics, focusing on workflow structuring and system design
- Developing a RAG-based clinical system for sepsis symptom analysis, improving accuracy of context-aware medical queries

Neo Green Infra Solutions

May 2025 – Aug 2025

Project Intern

Trivandrum

- Managed lead tracking workflows and client follow-ups to support solar project operations and improve process efficiency
- Analyzed lead engagement data to identify conversion patterns and support customer acquisition strategies
- Maintained and evaluated lead databases to prioritize follow-ups and improve conversion tracking visibility

Projects

Aegis — Fraud Strategy Experimentation | *Product Strategy, FastAPI, Python*

Github

- Defined the 0→1 product strategy for a no-code fraud experimentation platform, enabling risk teams to build, test, and iterate fraud detection workflows without engineering dependencies.
- Designed a visual workflow builder with configurable fraud rules, A/B testing, and transaction routing, accelerating rule experimentation by 10× and saving 15+ engineering hours/week.
- Defined key risk metrics and built simulation dashboards to validate fraud rules across 10,000+ historical transactions, projecting a 15% reduction in False Positive Rate (FPR).

Veil — Privacy-First Video Editor | *Product discovery, UX design, ML Kit, FFmpeg*

Check Project

- Led the 0→1 strategy for a privacy-first video editor using on-device ML to eliminate cloud processing.
- Defined Time-to-Redact (TTR) as the North Star metric, reducing average redaction time to under 60 seconds.
- Prioritized MVP features using the RICE framework, focusing on local ML-powered face tracking for fast, secure masking.

KitchenMate — AI-Powered Cooking Assistant | *Product discovery, prototype, Claude, API*

Check Project

- Led 0→1 product strategy for KitchenMate, reframing meal planning from recipe discovery to faster decision-making for users facing daily cooking fatigue
- Defined “Time-to-First-Decision” (TTFD) as the North Star metric and designed the MVP around achieving meal selection in under 30 seconds
- Conducted user and competitor research to define MVP features, reducing meal selection time by 75%.

MeetPilot — Local Meeting Assistant | *Product Strategy, UX, AI Workflow, APIs, Llama3*

GitHub

- Conceptualized and developed a privacy-focused AI meeting assistant that performs local transcription and summarization without relying on cloud-based processing.
- Designed the end-to-end user workflow for meeting uploads, AI-generated summaries, and searchable meeting history to improve meeting productivity and accessibility.
- Led product decisions around offline AI integration, balancing user privacy, performance, and usability while ensuring a smooth user experience.

ERP Digital Twin System for Ayurvedic Hospital Scheduling | *CREATE Lab*

Check Project

- Designed a digital-twin based ERP system to streamline therapy scheduling and operational workflows for Ayurvedic clinics
- Defined user roles and structured workflows across 10+ therapy processes, reducing manual scheduling complexity
- Authored PRDs, process diagrams, and system logic to support scalable and reliable product design

Achievements and Leadership

- Led the College Fashion Club, planning, organizing, and executing multiple high-impact events both on and off campus, while coordinating a diverse team of members.
- Managed social media strategy for various college clubs, improving audience engagement, content quality, and overall campus visibility.
- Recognized as School Valedictorian in 10th grade for outstanding academic performance.
