Professional Summary

Engineering graduate focused on AI-driven product development with experience building and shipping systems across RAG, IoT, and workflow automation. Worked on product definition, user flows, and system design for real-world use cases including ERP scheduling and AI-powered platforms. Skilled in bridging technical implementation with product thinking, including requirement definition, data-driven workflows, and rapid prototyping.

Experience

C.R.E.A.T.E Lab

Oct 2025 – Ongoing

Product Intern

IIIT kottayam

- Contributing to development of a digital-twin ERP product for Ayurvedic clinics, focusing on workflow structuring and system design
- Developing a RAG-based clinical system for sepsis symptom analysis, improving accuracy of context-aware medical queries

Neo Green Infra Solutions

May 2025 – Aug 2025

Project Intern

Trivandrum

- Managed lead tracking workflows and client follow-ups to support solar project operations and improve process efficiency
- Analyzed lead engagement data to identify conversion patterns and support customer acquisition strategies
- Maintained and evaluated lead databases to prioritize follow-ups and improve conversion tracking visibility

Projects

KitchenMate — AI-Powered Cooking Assistant | *Product discovery, prototype, Claude, API*

Check Project

- Led 0→1 product strategy for KitchenMate, reframing meal planning from recipe discovery to faster decision-making for users facing daily cooking fatigue
- Defined “Time-to-First-Decision” (TTFD) as the North Star metric and designed the MVP around achieving meal selection in under 30 seconds
- Conducted competitor and behavioral analysis, identifying opportunities to improve meal-selection speed by 75% over traditional recipe apps
- Prioritized MVP features using the RICE framework and built a Gemini-based recommendation workflow to deliver fast, context-aware meal suggestions while reducing choice overload

ERP Digital Twin System for Ayurvedic Hospital Scheduling | *CREATE Lab*

Check Project

- Designed a digital-twin based ERP system to streamline therapy scheduling and operational workflows for Ayurvedic clinics
- Defined user roles and structured workflows across 10+ therapy processes, reducing manual scheduling complexity
- Authored PRDs, process diagrams, and system logic to support scalable and reliable product design

Knowledge Graph RAG for Football Data | *Python, Neo4j, FAISS, LLMs*

Check Project

- Built a hybrid Graph + Vector RAG system combining Neo4j and FAISS for football query answering
- Improved answer accuracy by ~25–35% compared to baseline RAG (without knowledge graph) through multi-hop reasoning
- Designed Cypher-based query pipelines enabling complex relational queries across player and match data

AI-driven UGC Platform Prototype | *Supabase, No-code, AI Tools*

Check Project

- Designing an AI-assisted UGC platform to improve content discovery and user engagement
- Defined user journeys and feature prioritization to reduce content search friction and improve discovery efficiency

IoT Systems (Gesture Vehicle & Air Mouse) | *Arduino, ESP32, C++, Python*

Check Project

- Built real-time IoT systems including a gesture-controlled vehicle and Air Mouse using ESP32 and motion sensors
- Achieved low-latency wireless communication (<100 ms response time) using Bluetooth/Wi-Fi pipelines
- Integrated hardware and software systems for reliable real-time control and data transmission

Education

Indian Institute of Information Technology Kottayam <i>Bachelor of Technology in Electronics and Communication</i>	Nov. 2022 – May 2026 <i>CGPA:6.85</i>
St. Joseph’s HSS, Trivandrum <i>Class 12</i>	June 2019 – May 2021 <i>99%</i>

Skills

AI: Generative AI, RAG, Context Engineering, Knowledge Graphs (Neo4j), LLM Evaluation
Product: 0-to-1 Discovery & Development, Product Vision, Roadmapping, GTM Strategy, PRDs, User Story Mapping, Backlog Refinement, RICE Prioritization, Agile
Data: SQL, A/B Testing, Funnel Analysis, Cohort Analysis, North Star Metrics, Growth Tracking
UX: User Research, User Journey Mapping, Rapid Prototyping, Wireframing
Tools: Jira, Confluence, Figma, Power BI, Supabase, n8n, GitHub

Achievements and Leadership

- Led the College Fashion Club, planning, organizing, and executing multiple high-impact events both on and off campus, while coordinating a diverse team of members.
- Managed social media strategy for various college clubs, improving audience engagement, content quality, and overall campus visibility.
- Recognized as School Valedictorian in 10th grade for outstanding academic performance.
